PRODUCT RANGE & TECHNICAL CATALOGUE

Chemical Bonded Non-Woven Interlining

Fusible and non-fusible interlining engineered for apparel reinforcement, logos, selected embroidery support and applications that require a soft, controlled hand. Manufactured in Gujranwala, Pakistan for local production and export enquiries.

PRODUCT TYPES Fusible & non-fusible	**COMPOSITION** Polyester + viscose / viscose	**FUSIBLE COATING** LDPE
TOTAL WEIGHT RANGE 21–105 GSM	**STANDARD WIDTHS** 20" / 40" / 60" / 80"	**COLOUR OPTIONS** White / black / custom

Choosing the right grade

Fusible grades carry LDPE coating and are selected where heat-activated bonding to the shell fabric is required. **Non-fusible grades** provide support without an adhesive layer. V 7000 and V 8000 are listed as tear-away options in this range.

Final selection should be based on the outer fabric, required hand feel, total GSM, wash-care route and production equipment. A sample fusing or sewing trial is recommended before bulk production.

Typical applications

Ladieswear and menswear components; collars, cuffs, plackets and pockets where a softer support is preferred; kurti and shalwar kameez components; logos, patches and selected embroidery support; plus custom garment applications subject to testing.

In Pakistan's garment trade, this product family may also be requested as **non-woven paper**, **chepi/cheppi/chapi buckram** or **bukram**. For technical orders, use the article number, composition, GSM, width and fusible/non-fusible type.

ORDERING NOTES	Specifications are reproduced from the supplied product sheet. Width, colour, coating and custom availability should be confirmed against the required quantity before order. GSM figures are nominal. Test the selected grade with the actual face fabric and production conditions before bulk use.
LOCAL TRADE TERMS	Chemical bonded non-woven interlining may also be requested locally as interlining paper, chepi/cheppi/chapi buckram or bukram. These names vary by market; the article number and technical specification remain the safest ordering reference.
